GRIDLOCK+

// INFINITE NEON BLOCK-ESCAPE PUZZLE // FOR APPLE ARCADE

The color-block escape puzzle millions already play, rebuilt as an endless cyberpunk heist. Slide every block out through the door of its color. Every lock is generated, proven solvable by a solver and never repeats; every day the whole world gets the same board.

SOLVER-VERIFIED LOCKS	MODES	ACHIEVEMENTS	LANGUAGES

THE GAME

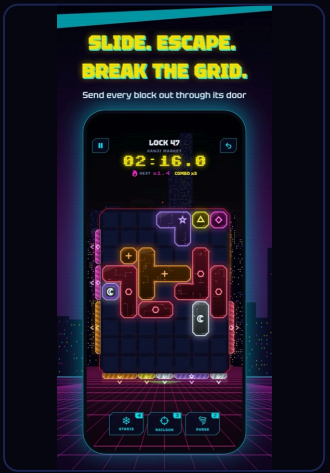

- **Descend**: endless locks in named districts, a Firewall boss every ten.
- **Daily Glitch**: one deterministic board for everyone each UTC day; fastest clear wins.
- **Overdrive**: time attack, every clear buys seconds.
- Seven protocols arrive one by one: rails, ICE, shells, spawners, laser bars, glitch doors, viruses.
- CRED ranks, HEAT streaks, combos, perfect clears, 22 cosmetics.
- Locks of 60–180 s: made for a commute, deep enough for an evening.

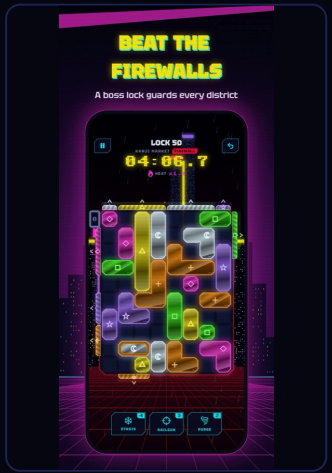

BUILT FOR ARCADE

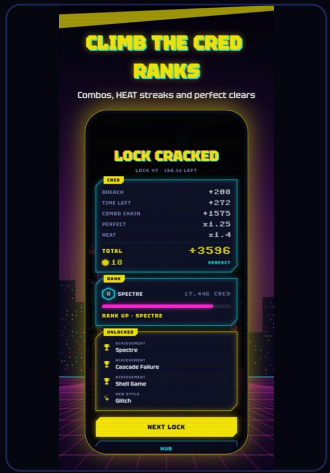

- **Gridlock+ build** from the same code (ARCADE flag): no ads, no purchases, no Chips packs; the gold set unlocks at lock 100 instead.
- **Game Center everywhere**: 6 leaderboards (daily and weekly recurring), 37 achievements, 3 Games-app activities, an Overdrive challenge, saved games across devices.
- **Controllers and keyboards** in play and menus.
- **iPhone, iPad, Mac and Vision Pro**, one save.
- **Accessibility**: VoiceOver board labels, Dynamic Type, Reduce Motion, color + glyph on every block.
- **21 languages**, including right-to-left Arabic.

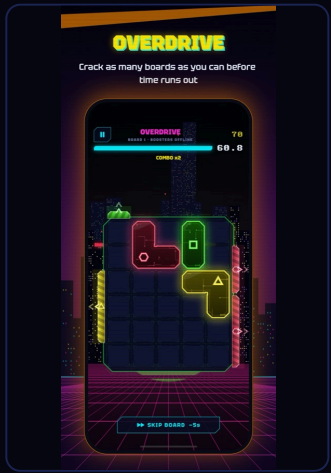

CRAFT

Original everything: a synthwave soundtrack synthesized in-house (seven tracks with tension stems that rise as the clock runs down), original art, an original knife-cut wordmark, open-licensed type. Native Swift, SwiftUI and SpriteKit, Metal shaders, no third-party SDKs, no data collected.

Release held for Arcade · TestFlight on request

ON EVERY SCREEN

WHERE IT STANDS

- Version 1.0 is feature-complete: 3 modes, 7 mechanics, Game Center catalog live in App Store Connect, 21 languages.
- The App Store edition (free, optional Chips packs, no ads) is in App Review on iPhone, iPad, Mac and Apple Vision Pro, with its release held so the game stays unreleased while Apple considers it. The Gridlock+ edition builds from the "Gridlock Arcade" scheme of the same project and can ship on Apple's timeline instead.
- Generator locked by a golden test: every player, on every device, sees the same lock N and the same daily board.
